

2-CAN From FLOW-FX

A disposable answer to the needs of the Biologics Era
2-Can, our Multichanneled Side Port Cannula, fulfills any need for biologics delivery not addressed by Flow-Nail and Flow-Screw.

An FDA Class 1 device, 2-Can is intended for one time use delivering biologics including bone void fillers with or without an implant.

- Passing over a guide wire, **the multichanneled design isolates the biologics delivery chamber from the guide wire** preventing unwanted biologic extrusion while keeping the guide wire as clean as possible.
- Creating new treatment paradigms for problem fractures, **2-Can is available in a range of sizes ensuring the success of almost every procedure.** From a 3.5 screw to a femoral/tibial nail, **2-Can** is compatible with most fracture systems.
- An integral plunger **maximizes the efficiency of biologic delivery** and assists in maintaining an open implant channel.
- Use **2-Can** (delivered in sterile 2-envelope containment), after drilling/tapping but prior to screw or nail placement. Precision delivery is achieved with **2-Can's Side-Port Cannula design with a radiopaque tip.**

Intended for world-wide distribution, the Flow-Fx 2-Can will be available in the USA 2nd Quarter, 2014 and everywhere else shortly.
