

FlowTM SCREW From FLOW-FX

The Biologics Era has officially begun, allowing dramatic alterations in orthopedic fracture care, just in time to address the steadily rising number of osteoporotic fractures as well as complex non-healing fractures.

- The patented Flow-Screw System with the Flow-Fx Side-Port Cannula delivers biologic material such as bone void filler throughout the body – to almost any injured bone.
- Cannulated, fenestrated screws available in 7.3mm, 6.5mm, 5.5mm, 4.5mm, and 3.5mm in partially threaded and fully threaded versions.
- Aggressive thread and wide range of lengths make it **appropriate for usage in most situations.**
- **Precise delivery of bone void** filler through the screw without disrupting the soft-tissue envelope!
- A capable standalone fixation system, **Flow Screw can also work alongside other systems** for improved outcomes.
- Screw head **allows screw adjustment or removal** without Flow-FX custom driver.

While Flow-Fx is currently pursuing FDA 510k approval and CE marking for the Flow-Screw, the Flow-Screw is intended for eventual world-wide distribution in the near future!
